TUBES THAT SET THE TONE

WORMS, GERMANY
EST. 1993

TUBES THAT SET THE TONE

Tube Amp Doctor is a German company specialized in electron tubes and related components for musical instruments and audio amplification.

TAD is closely cooperating with all of the few existing tube factories. Our techs, who are all active musicians, have been developing processes to test and secure the quality, consistency and reliability of our TAD Tubes. TAD STR Tubes (Special Tube Requirement) are produced to exclusive TAD design and strict specifications. TAD Tubes get evaluated, tested, approved, selected and finally matched, labeled and boxed. All tube quality control and processing is done at the TAD plant in Germany.

Every single tube has passed our listening test to ensure the finest selection of best premium quality tubes available on the market to support your music.

TAD TUBE Laboratories

quality control and test approach

BURN IN PROCESS

Tubes must be properly burned-in to provide the stable and reliable data that is required for quality tube matching.

This is a time- and energy-consuming and cost-intensive process, which most new tubes on the market are not subjected to. During the extensive TAD burn-in procedure, the tube's cathode surface is formatted, which balances the tube's emission and offers increased dynamic headroom. This in itself leads to a better overall response and smooth tone. TAD Tubes offer maximum reliability, consistency and sturdiness for one goal: the ultimate tone!

Our technicians test all TAD Tubes in-house at our facilities in Worms, Germany. They are all musicians and guitar players and they have developed and constructed our own customized tube testing systems and aging rigs to run tubes in real amplifier circuits and under operating conditions. For TAD, real tube quality control is way more than just a simple test.

TAD BIAS SYSTEM

The bias setting of any has a noticeable impact on its tone and attack. The bias can be set "colder" for a cleaner sound or "hotter" for more punch and easier saturation. If the bias is set too "hot," the tubes will be wearing out faster than normally. With a correct bias setting you can achieve the right compromise between punch and headroom, and you can choose the tone and level of attack you like. TAD's BiasMaster is the perfect tool for monitoring the bias of the current in the circuit of your amp. TAD's matching system offers even more: Once the preferred bias has been identified and adjusted, replacement tubes for your amp will always fit perfectly - the TAD PC number will allow you to order tubes with the exact same plate current - plug and play at its best. No further adjustment required! And: All TAD Tubes of one group (e.g., all 6L6 tube including 5881) have compatible PC-numbers and can be interchanged if they have the same PC number, which enables you to enjoy wide ranging musical experiences!

TAD TUBE TEST APPROACH

Before a TAD Tube receives our seal of approval, we perform extensive sample evaluation testing: consistency, power, and shock resistance are tested, we perform a "soak test" (long term operation at full power) and, of course, a "sound and music" test with the tubes operating in amplifiers we know, so we can learn about the sound character of our tubes and how they perform in different musical styles and different amplifiers. The main tests are conducted after a proper pre-aging - to stabilize the cathode emission - has taken place. While most tube test equipment does work at a maximum 250V, we built our test rig to operate at voltages of 360 to 600V, depending on the tubes that are tested.

Every TAD Tube is tested by our qualified staff. Each pentode is inspected and tapped during operation - we listen for noise floor, hum and "odd noise." Finally, we measure the tubes according to a pre-defined set of parameters and match them by Ia (PC) and Gm (TC). We test batches of 400 to 500 pieces per run to ensure tightest tolerances of typically 0.5mA for PC-levels.

All TAD Tubes and boxes are labelled with the PC and TC test results and a unique serial number, which allows us to identify every tube we have ever tested. We permanently verify and monitor selected and matched TAD Tubes by using them every day in our own amp service department and in the TAD Amp Kits we assemble.

This is the most complete quality control system we can imagine. All done in-house at TAD in Germany.

POWER TUBES

TAD 6L6GC-STR

The classic 6L6 sound

The 6L6GC-STR provides the low end with the right amount of pressure, as known from the famous RCA tubes, it has clear, transparent but unobtrusive highs and exactly the right bite to provide you with all those classic 6L6 sounds from big warm cleans to modern hard rock sounds. This TAD 6L6GC-STR combines the famous reliability of the American-made Philips/Sylvania STR series with the blackplate systems of the legendary RCA 6L6GC.

Recommendation: Silky top end combined with a deep bass response and lots of headroom make this tube our choice for lively clean sounds and powerful broadband multichannel amps.

Part No.: RT211

TAD 6L6WGC-STR

The classic tone of the 1950s and 60s

The TAD 6L6WGC-STR is a remake of the small bottle GE6L6GC and has the same warm lower midrange and silky top end as the classic GE versions of the 1950s and 60s. Like the historic RCA 5881, this tube features exclusive blackplate anodes and a side getter. The perfect choice for vintage tweed and blackface amps such as the 1960 Bassman, Twin, Showman or Super Reverb. Great for fat jazz or blues tones.

Recommendation: The TAD 6L6WGC-STR is our preferred choice for classic tones. It provides warm cleans, a rich and sweet midrange and early saturation - ideal for single channel amps that have no master-volume and vintage tweed-style amps.

Part No.: RT211

TAD KT66

Old school tone

The TAD KT66 delivers old-school tone out-of-the-box. A faithful reproduction of the great British KT66 by MOV (MO Valve), GEC, Genalex or Gold Lion. This tube made the Marshall JTM45 Plexi Amps famous in the 1960s and helped the Quad Hi-Fi amps achieve their legendary status. Talking of legends: SRV created his gigantic guitar tone with the help of KT66s in his Fender amps. This tube is the "real thing" with a large curved glass envelope and a rounded brown base.

The KT66 can replace 6L6GC and 5881 tubes.

Part No.: RT221

TAD 6V6GT-STR

Sweet full-bodied tone

The TAD 6V6GT-STR is a heavy duty 6V6GT tube, which can handle a higher plate current. It works great in Tweed 5E3 Deluxe and Deluxe Reverb Amps. Even when pushed into saturation there are no harsh upper mids, which is frequently the case with other 6V6's. The TAD 6V6GT-STR always remains detailed and has a powerful tone and an abundance of sustain – characteristics you usually only expect to find in the finest NOS 6V6GTs from the 1950s and 60s. Sweet full-bodied tone with silky highs.

Part No.: RT231

TAD EL34B-STR

The most versatile EL34

The TAD EL34B-STR is an authentic remake of the British Mullard EL 34, a true pentode tube. The clear and harmonic open top end allows for a great clean tone and at the same time the TAD EL34B-STR offers incredibly powerful mids and an equally powerful bass. The golden control grid and especially large cooling grids guarantee maximum stability and reliability, and, consequently, this EL-34 provides a maximum of gain and dynamic response. This tube provides the highest TC (Gm) ratings of all EL34 options resulting in a very dynamic tone. The TAD EL43B -STR can be used as a replacement for 6CA7 and KT 77, easily meeting the requirements for these tubes.

Part No.: RT161

TAD E34L-CZ

Punchy mids and focused power

The E34L is a long-life EL34 type tube with thick and especially solid glass. It delivers lots of bite in the top end, punchy mids and well-focused bass power.

Our burn-in process increases the electrical stability of this tube immensely. The increased stability is the basis for our subsequent matching process. Our TAD matching process takes into account the dynamic aspects of tubes and allows for precise matching under real operating conditions. This process allows us to achieve an unparalleled sound quality.

Part No.: RT151

TAD EL34-SVT

The legendary winged -c-

The Svetlana EL34 is very dependable and our choice for combos. While it provides a somewhat lower power, it is known for its nicely balanced tone with fine highs, a very detailed and musical mid-range and just the right amount of bass. The TAD EL34-SVT is selected from the original Svetlana-Factory production in St. Petersburg, the factory that produced the tubes marked with the legendary winged -C- logo. This tube is another example where our TAD burn-in and matching processes optimize the sound potential of any tube: The clear and lively tone and its three-dimensional character, which can be achieved with matched TAD pairs speaks for itself.

Part No.: RT251

POWER TUBES

TAD EL84-STR

No compromise

The TAD EL84-STR combines best of both worlds. We opted for the thickest glass possible and the heaviest construction available, just like the Russian EL84M, and combined these features with the sonically most promising cathode and plate options to meet and exceed the tonal quality of the EL84-Cz. Finally, we added a gold grid wire to limit stray radiation characteristics and to improve overall reliability. The result is the best EL 84 currently available.

Part No.: RT871

TAD EL84M

Long life guaranteed

The TAD EL84M is characterized by a mid-range that really cuts through and a tight bass response. Even when you play at lower volume levels or in a complex sound situation on stage, you will be heard. This EL84 version is the most rugged and long-lasting military grade EL84 on the market, originally designed for military purposes as well as for aerospace applications, and designed to last up to 10,000 operating hours - the most reliable EL -84 ever built. Unfortunately, this tube is not being produced anymore.

Part No.: RT371

TAD EL84-CZ

Roughneck with powerful tone

The TAD EL84-CZ is the powerhouse and roughneck among the EL84s and provides most amps with an extra powerful base response. You have to be careful with amps that already have a fat bass and you need to ensure that your speaker can handle the increased bottom end - it may just be too much. The EL84-CZ is the most powerful EL84 tube we ever heard. It has a big tone and is very dynamic. Our recommendation, if a powerful tone is what you are looking for.

Part No.: RT271

TAD 5881 WXT

Hard rock!

The popular TAD 5881WXT is a dependable 6L6GC-type tube with a more modern and aggressive character. It has slightly less power than a 6L6GC but a special bite in the upper mid-range, which allows you to cut through any sound on stage. The 5881WXT is known as "the" stock tube in many recent Fender amps, but it is our recommendation for hard rock and guitars tuned low.

Part No.: RT311

TAD 7027A

Beefy 35W plate dissipation

The 7027A has been used in many vintage Ampeg amplifiers, such as the Portaflex B15S, B18N, B25, V2, V3, V4, V4B, VT22, or VT40 and in U.S.-made audio equipment. The 7027A is close to a 6L6GC, but due to a different base diagram it is not 100% compatible. The TAD 7027A is a heavy duty version, perfectly designed for use in demanding applications. It delivers the power and dynamics you need to bring your amp to its best original tone.

Part No.: RT241

TAD 6550A-STR

A remake of the classical GE 6550A

The TAD 6550A-STR is a faithful remake of the vintage GE 6550A with a heavy straight glass envelope, a polished metal base and the authentic triple getter construction. A balanced tube, known for its incredible bottom end and rich mid-range. Smooth, liquid bass, natural sounds and a wide open character make this tube extremely popular for bass guitar amps and high-end Hi-Fi applications.

The TAD 6550A-STR meets or exceeds the specifications of the classic 6550A and can be used in any application that needs 6550 type tubes. Great performance guaranteed.

Part No.: RT881

TAD KT88-STR

Our favourite tube in KT88/6550 class

The latest version of our TAD KT88-STR is built in the style of the early British MOV KT88. It has the same big and heavy glass envelope and beautiful polished metal base. Wonderful tone and great appearance make this tube the most attractive choice for high-end audio applications and powerful bass guitar amps. It delivers a three-dimensional tone, which is very pleasing - warm and detailed with subtle highs

Very musical, this tube offers finest details in the mid-range and the top end. Linear, harmonious overall response with a very natural sound make the TAD KT99-STR our favourite in the KT88 and 6550A classes.

Part No.: RT891

PREAMP TUBES

Tweak your Tone

WITH TAD SELECTED PREAMP TUBES

The possibility to choose your own TAD Preamp Tubes provides you with an amazing control over the character, voice and response of your amp. Just to avoid any misunderstanding: You will not be able to turn an amp with plenty of clean headroom designed for jazz into a monster metal amp with tons of gain. But you can turn your amp into a sparkling sound machine that perfectly suits your own style.

You can change preamp tubes of guitar amps and most hi-fi audio amps without having to adjust any of the amp settings (always observe the manufacturer's safety instructions!). True "plug and play!" It may be advisable to choose replacement tubes from the same group of preamp tubes the original belonged to. For guitar amps this would mean you best stay within the 12AX7 family (A, WA, LPS, EH or whatever the suffix following the 12AX7 is), 7025, ECC83, 5751, 12AY7 etc.

- RT080**
7025 WA HIGHGRADE
excellent liquid tone;
full gain; smooth top end;
fat midrange;
very responsive and dynamic;
super low noise!
- RT011**
7025 S
Mullard style;
smooth and rich top end;
warm mid range;
very detailed;
good gain!
- RT030**
7025/E83CC HIGHGRADE
full midrange punch;
mellow top end;
fat low end; not too deep;
medium dynamics!
- RT009**
5751 PREMIUM SELECTED
a bit lower gain than 12AX7;
great headroom; big bottom;
outstanding warm cleans;
silky top end!
- RT007**
12AY7/6072A
vintage tweed tone;
low gain, great for that
warm clean vintage tone;
fat mid range when pushed!

TAD 7025WA HIGHGRADE

We have designed the new TAD 7025 WA with a triple mica construction to exclude microphonics issues even when used in the most sensitive preamps. The 7025 WA supports a fat midrange and has a bold tone with lots of harmonics. Played clean, the TAD 7025 WA delivers a warm liquid tone which is very responsive to dynamic playing. The 7025 WA supports a fat midrange and has a bold tone with lots of harmonics. Played clean, the TAD 7025 WA delivers a warm liquid tone which is very responsive to dynamic playing. Overdriven the 7025 WA provides lots of sustain with well defined mid-range punch. The 7025WA HIGHGRADE is recommended for the most demanding amp input stages (V1).

Part No.: RT080

TAD ECC83WA SELECTED

The new TAD ECC83 WA Selected provides a stunning, warm tone, thick midrange and sweet natural harmonics. We designed it to come with a triple mica construction for low noise performance. Perfect for clean or moderate gain preamps as well as in the V2 position of high-gain amps. Its great dynamics, low noise operation and balanced warm tone make the TAD ECC83 WA an excellent allrounder - great value for money!

Part No.: RT008

TAD 12AX7A-C SELECTED

Very good gain, tight deep bass, fat mid-range and silky top end, very well defined with an overall brightness. Selected and recommended for guitar amps to improve overall response. Best for clean sounds and for modern preamps designed to provide deep basses. Recommended for all positions in medium gain amps or the V2 position in high-gain amps.

Part No.: RT001

TAD 7025S SELECTED

The TAD 7025 S is a faithful reproduction of the legendary original Mullard ECC83 valve, which was made in England until the late 1960s. This tube is regarded the Holy Grail of double-triode preamp valves. The TAD 7025 S delivers a rich, harmonically complex tone and a warm mid-range. Simply outstanding!

Part No.: RT011

TAD 7025/E83CC HIGHGRADE

HIGHGRADE selected quality for the most demanding amp stages. As per our TAD "Highgrade Specifications," this tube is selected to be extremely quiet; it is not microphonic and has no hum. Great warm clean tones, punchy mids and a fat overdrive with smooth top end.

Part No.: RT030

TAD ECC83-CZ SELECTED

Selected ECC83 for big and warm clean sounds (also great for Hi-Fi) and a mellow top-end when pushed into overdrive. Our recommendation if you are seeking to reduce brightness slightly and you want to emphasize punchy mids. Especially great when pushed into a fat overdrive.

Part No.: RT003

PREAMP TUBES

TAD ECC803S SELECTED

A long-plate ECC83/12AX7A in the tradition of the famous Telefunken ECC803S. 1dB less gain than the original, but very detailed and defined, close to the TAD 12AX7A-C. Its strong cathode current makes it an ideal choice for the audio-driver stage.

Part No.: RT033

TAD 12AX7WA SELECTED

Very low noise but slightly less gain than a regular 12AX7A. Soft highs and edgy, dominant mids. Our recommendation when your amp has microphonics issues. This tube is used in many Fender amps made today. Use the TAD 12AX7WA to maintain your amp's original tone; choose the TAD 7025WA or TAD 7025/E83CC to improve dynamics, sensitivity and gain for a crispy and more vivid tone.

Part No.: RT008

TAD 5751 SELECTED

The TAD Selected 5751 is our first choice for noticeably improved clarity, smoothness, and a true vintage tone character of most guitar amps! There will still be plenty of gain - so if you own a high-gain preamp that does not have these classic crunch characteristics, the 5751 tube will work wonders. In hi-fi preamps and CD players, the TAD Selected 5751 will lower the noise floor and sound smoother and clearer than many 12AX7 tubes.

Part No.: RT009

TAD 12AY7 / 6072A SELECTED

The original tube of all those Fender Tweed amps from the 1950s. Brings back the original sound to your tweed amp.

Part No.: RT007

TAD 12AT7 / ECC81 SELECTED BALANCED

The TAD 12AT7/ECC81 is a low-noise tube, selected for best symmetry and balance. Strong driver tube and a wonderful rich-sounding reverb driver.

Part No.: RT002

TAD 12AU7A / ECC82 SELECTED BALANCED

Latest revision providing great musical performance and rich tone. This TAD-12AU7A/ECC82 has especially strong systems which are selected to provide two symmetric triodes. The perfect choice for stereo audio applications and ideal as a balanced driver.

Part No.: RT005

TAD 12BH7A-STR SELECTED BALANCED

The all-new TAD 12BH7A-STR combines the best sonic and mechanical performance of the NOS RCA blackplate with advantages of the GE version. A maximum of reliability with outstanding tonal quality makes the new "balanced selected TAD 12BH7A-STR" the first choice for Ampeg SVT's, the Blackstar HT-5 and high-end applications.

Part No.: RT043

TAD EF86 / 6267 SELECTED

This pentode is selected for little low-noise and low microphonics and is used in many hi-fi preamps. It recently gained popularity because it is used in many new guitar amps based on the vintage AC15 circuit.

Part No.: RT-EF86

RECTIFIER TUBES

TAD 5U4G

Big bulb vintage rectifier tube, used in high-end audio amplifiers but also in modern recto-type amps, such as the Mesa Boogie Double/Triple Rectifier. The 5U4G can replace the 5U4GB. Its tone is smoother than that of a solid state rectifier.

Part No.: RT512

TAD 5U4GB

The 5U4GB has a straight glass envelope. This type has been widely used in U.S.-made guitar amplifiers from the 1950s to the 70s. The 5U4GB has a slow start feature, which protects output tubes from high voltage peaks when you switch the power on.

Part No.: RT504

RECTIFIER TUBES

TAD EZ81 /6CA4

The TAD EZ81/6CA4 is a small rectifier tube for 6.3V filaments. It is used in smaller amps, such as the Marshall 1974X, the TAD 18W Plexi Kit, Silvertone amps and in various Hammond organ amplifiers. The TAD EZ81/6CA4 is a true full power EZ81. Also used in many audio amps and in those unbelievably good sounding old tube radios.

Part No.: RT506

TAD GZ34/5AR4-STR

A faithful reproduction of the Mullard/VALVO GZ34. Pure power and the typical sag have been the distinguishing characteristics of the most popular guitar amps of guitar heroes since the 1960s.

Part No.: RT507

TAD 5Y3GT

The rectifier tube for smaller vintage amps such as the 5F1 Fender Tweed Champ or the Tweed Deluxe 5E3. This small bottle version is the closest in performance and reliability to the vintage 5Y3GT of the 1950s.

Part No.: RT503

TAD SOLID STATE RECTIFIER

Solid State Rectifier, replaces 5U4G/GB, GZ34, 5AR4 and 5Y3 rectifier tubes.

Part No.: RT515

You need more information about our tubes? TAD provides you with all specifications in detailed technical data sheets.

That's what my MUSIC deserves

"I love those handmade amps from the 1960s and 70s. They provide me with a raw and thoroughly honest tone. I appreciate Tube Amp Doctor's support – they provide the right tubes and parts that help me preserve that genuine tone."

Getting the right tubes for my tone – TAD tubes are the best money can buy."

TAD STR TUBES are based on the most sought-after NOS tube versions of the golden age of tube manufacturing. By capturing the original tone, dynamics and response, these TAD STR Tubes provide the basis for authentic feeling and sounds.

The choice of tubes has a serious impact on the tone and response of your amp and the right choice will be a great inspiration – the right choice will boost your playing and pleasure. There is not is not only a choice between good and bad tubes; you have to choose the right tubes (and other components) for your individual style and your amplifier.

Our TAD Premium Series have the tubes you are looking for!

TAD EQUIPMENT

TAD Silencer™

power attenuator system

3-way BITE and PUNCH switches

amp cabinet design makes a perfect fit for your equipment!

CAUTION HOT
CONVERTS EXCESS POWER INTO HEAT WITHOUT IMPACT ON SOUND QUALITY

up to 150 WATT RMS

adjustable LINE-Out

F.A.N.T.A.™ OUT

Turn the page for further information...

The TAD Silencer™ is considered the reference for power attenuators. While it features various controls and settings, most important for us is our focus on pure and genuine tone! With its classic amp cabinet design, the Silencer also compliments your amp – it comes in the same style and it is "Handcrafted in Germany!"

The Silencer™ reduces output power and volume. Many popular rock guitar sounds are based on those well-known sounds created by the guitar legends of the sixties and seventies. There were no P.A. systems as we know them today. P.A. systems were simply used to amplify vocals. Consequently, guitar-players had to crank up their amps to full volume to be heard against drummers or bass-players. And: Tube guitar amps do sound best when played loud because the output stage starts to saturate and delivers the most musical and harmonic distortion, wonderful sustain and a thick tone with overall response. This is what we all are looking for, but if a 50 or 100 Watt amp is played at full volume, it gets easily so loud that you may damage your hearing, you may annoy your audience, your band members or worse, your neighbours: The Silencer™ solves this problem.

It is connected between the amp speaker output and the speaker(s) (or speaker cabinet) and provides total control on what part of the power output will be fed to your speakers. The power that is not going into the speaker(s) will be converted to heat. So you can crank up the amp to the setting where it sounds best and adjust the final volume just for your speakers. All components forming a great guitar tone are still working - "crank up" your amp, use your favorite settings (preamp tubes, driver stage, output tubes, transformers etc.) and enjoy the great tone. The final volume you hear is adjusted after the amp's output. The power attenuation can be set in convenient 2db steps from full power to -16db. From -16db on you even can fine-tune the level - to total silence.

TYPICAL LIVE/RECORDING SETUP

Power attenuation to reduce volume when playing live or recording: Use a speaker cable to connect the speaker output jack of your amp with the jack labeled "INPUT FROM AMP" of the Silencer™. Connect the upper SPEAKER OUTPUT jack (the one with the one-cabinet icon) of the Silencer™ with your speaker cabinet. An additional cabinet can be connected with the lower SPEAKER OUTPUT jack of the Silencer™ (the one with the two-cabinet icon). The total load of the connected cabinets must match the impedance of your amp and of the Silencer™. Connect the F.A.N.T.A. OUT using a standard microphone cable with your mixing console. Set the POWER switch to FULL and switch on the amp. Now you adjust the desired volume with the POWER switch and the FINE control. BITE and PUNCH switches are affecting the sound of the cabinet(s) connected to the SPEAKER OUT jack(s).

TAD EQUIPMENT

TAD BiasMaster™

Check your bias

TAD BiasMaster™: Dedicated measuring device for tube amps lets you control the correct bias point of your power tubes. In conjunction with TAD Tubes, this is the easy way to achieve your perfect tone. The TAD BiasMaster™ includes 2 or 4 octal probes (depending on which version you choose) and is also available as an EL84 version with noval probes.

Handcrafted in Germany!

TAD F.A.N.T.A.™

Speaker emulation

TAD F.A.N.T.A.™: The superior speaker emulation of our TAD Silencer™ is also available as a separate tool. Extremely pick sensitive pure analogue technology.

Handcrafted in Germany!

TAD RangeKing™

The flexible booster

TAD RangeKing™: Not an ordinary treble booster, but a highly flexible tone tool for the most diverse applications. A power-booster featuring the great "BALLS" control for your tone control and the outstanding "Range"-effect.

Handcrafted in Germany!

TAD ToneBone™

Plug'n'play class A

TAD ToneBone™: Easily and quickly turn your 100 W amp monster into an exciting Class-A tone machine with 7W, 15W or 30W, while still maintaining the original amp's tone character. TAD Tone Bones™ enable pure harmonic power coming from amp saturation at lower volume levels. Our TAD ToneBone™ is available as pentode version providing approximately 15 W, and a triode version providing around 7W when used as a duet (depending on your amplifier). Handcrafted in Germany!

TRIODE VERSION: approx. 7 Watt a pair
PENTODE VERSION: approx. 15 Watt a pair

TAD MUSTARD CAPS

TAD supplies exact replicas of the sought-after Mustard Caps with the authentic film-to-foil alu/PE design of the 60's. Mullard/Philips capacitors as used in the famous British amps that were built in the 60s until the mid-70s. TAD Mustard Caps are dedicated to bring back the character of the classic Marshall and Hiwatt amps and are used for restoration of old originals, to upgrade remakes or simply to tweak modern amps. These capacitors are made exclusively for us. TAD Mustard Caps are mainly handmade - the special material and manufacturing technique cannot be reproduced by modern industrial capacitor production methods.

TAD AUDIO CAPS

TAD Audio Caps feature the authentic flat-foil design of the capacitors used in the 1950's, 60's and 70's and come in the same size as the originals! The special design of these electrolytic caps improves any tone with perfect details and excellent overtones. Our caps are the perfect replacements for all Fender Blackface and Silverface amps. Our suggestion to improve all kinds of guitar amps and hi-fi equipment.

TAD GOLD CAPS RADIAL

TAD Gold Caps in their radial "can" shape are especially made for "British" amps. With their vintage correct sizes and specifications, the TAD Gold Caps bring you the classic tone from the 60's - , the tone for which Plexi JTM, JMP, JCM and Co. are so famous for! Especially suited for repairing, restoring and modifying Marshall, Hiwatt, Orange, Sound City, Selmer and many more! TAD also supplies the appropriate mounting clamps.

TAD GOLD CAPS AXIAL

TAD axial-shaped Gold Caps entail the entire range of electrolytic capacitors, which are used in all kind of tube amps. These caps offer high temperature resistance in a small package. The perfect replacement caps for all kind of tube amps! TAD also carries obsolete types and values!

let your amp sing!

with genuine

Reverb Cans

Tube Amp Doctor

classic spring reverberation at its best

TAD has re-defined the spring reverb! When Accutronics Reverb closed its production facilities in the United States, we started to research the potential for producing our own TAD high-quality, classic spring reverb units. Our goal was to bring back that stunning reverb sound, Fender had been renowned for since the 60's as a high-quality replacement unit, ready to be dropped into any appropriate amplifier. With our TAD Reverb Cans, we were able to achieve this goal and even more: they offer a deep and smooth reverb, a wide frequency range response without fluttering, and plenty of air, which will make you enjoy your playing even more. The ideal drop-in replacement and upgrade for vintage and modern amps!

TAD RV-9AB2A1B

Our part number uses the classic coding-standard to make it easy to spot the correct can for your amp.
